

Project: Flipy – Learning Application

Method: Nielsen's Heuristic Evaluation

No	Heuristic	Description of the Issue	Screenshot	Severity	Suggested Improvement
1	H1-1: Simple & natural dialog	The interface is simple and visually clean. However, some empty-state screens contain large unused spaces and limited guidance, which may make users unsure about the next action.		1	Add clearer call-to-action messages such as "Enroll to your first class" to guide users.
2	H1-2: Speak the users' language	The application uses clear, simple English. A language selector exists on the welcome screen, showing good localization awareness.		0	No improvement needed
3	H1-3: Minimize users' memory load	Bottom navigation clearly shows main functions. However, users must remember valid input requirements when creating a quiz (e.g., number of questions).		2	Provide hints such as "Enter a number between 1 and X" below the input field.
4	H1-4: Consistency	The interface demonstrates consistent use of colors, typography, navigation structure, and button styles across all screens, supporting a predictable and easy-to-learn user experience.		0	No improvement needed.

5	H1-5: Feedback	When the user clicks “Generate” or “Save” without input, the system provides immediate feedback via a warning dialog. This is clear and helpful.		0	No improvement needed.
6	H1-6: Clearly marked exits	Back buttons are present and clearly visible on New Quiz, Help, and About Us screens. Navigation exits are easy to understand.		0	No improvement needed.
7	H1-7: Shortcuts	The application focuses on simple, step-by-step interaction. However, there are no shortcuts for experienced users.		2	Add optional shortcuts such as “Quick Quiz” or default values.
8	H1-8: Precise & constructive error messages	The error message “Invalid email or password” is clear but does not explain how to fix the issue.		2	Provide more specific messages such as “Invalid email format” or “Incorrect password”.

9	H1-9: Prevent errors	Errors are handled after submission rather than prevented beforehand. The system allows clicking “Generate” even when the input field is empty.		2	Disable the “Generate” button until a valid number is entered.
10	H1-10: Help and documentation	The Help screen and About Us section provide sufficient guidance for new users, including quick start instructions and common tasks. The documentation is easy to understand and accessible at any time.		0	No improvement needed.
